

## Excercise 3

Date:

### **Develop and compare CLI, GUI, and Voice User Interfaces (VUI) for the same task and assess user satisfaction using Python (Tkinter for GUI, Speech Recognition for VUI), Terminal**

#### **AIM:**

The aim is to develop and compare Command Line Interface (CLI), Graphical User Interface (GUI), and Voice User Interface (VUI) for the same task, and assess user satisfaction using Python (with Tkinter for GUI and Speech Recognition for VUI) and Terminal.

#### **PROCEDURE:**

##### **i) CLI (Command Line Interface)**

CLI implementation where users can add, view, and remove tasks using the terminal.

```
tasks = []
def add_task(task):
    tasks.append(task)
    print(f"Task '{task}' added.")

def view_tasks():
    if tasks:
        print("Your tasks:")
        for idx, task in enumerate(tasks, 1):
            print(f"{idx}. {task}")
    else:
```

```

        print("No tasks to show.")

def remove_task(task_number):
    if 0 < task_number <= len(tasks):
        removed_task = tasks.pop(task_number - 1)
        print(f"Task '{removed_task}' removed.")
    else:
        print("Invalid task number.")

def main():
    while True:
        print("\nOptions: 1.Add Task 2.View Tasks 3.Remove
Task 4.Exit")
        choice = input("Enter your choice: ")

        if choice == '1.':
            task = input("Enter task: ")
            add_task(task)
        elif choice == '2.':
            view_tasks()
        elif choice == '3':
            task_number = int(input("Enter task number to
remove: "))
            remove_task(task_number)
        elif choice == '4':
            print("Exiting...")
            break
        else:
            print("Invalid choice. Please try again.")

if __name__ == "__main__":
    main()

```

## OUTPUT:

```

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit
Enter your choice:
1
Enter task:

```

```
gopal died
Task 'gopal died' added.

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit
Enter your choice:
3
Enter task number to remove:
gopal died
Please enter a valid number.

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit
Enter your choice:
2
Your tasks:
1. gopal died

Options: 1. Add Task 2. View Tasks 3. Remove Task 4. Exit
Enter your choice:

Session Killed due to Timeout.
Press Enter to exit terminal
```

## ii) GUI (Graphical User Interface)

Tkinter to create a simple GUI for our To-Do List application.

```
import tkinter as tk
from tkinter import messagebox

tasks = []

def add_task():
    task = task_entry.get()
    if task:
        tasks.append(task)
```

```

        task_entry.delete(0, tk.END)
        update_task_list()
    else:
        messagebox.showwarning("Warning", "Task cannot be
empty")

def update_task_list():
    task_list.delete(0, tk.END)
    for task in tasks:
        task_list.insert(tk.END, task)

def remove_task():
    selected_task_index = task_list.curselection()
    if selected_task_index:
        task_list.delete(selected_task_index)
        tasks.pop(selected_task_index[0])

app = tk.Tk()
app.title("To-Do List")

task_entry = tk.Entry(app, width=40)
task_entry.pack(pady=10)

add_button = tk.Button(app, text="Add Task",
command=add_task)
add_button.pack(pady=5)

remove_button = tk.Button(app, text="Remove Task",
command=remove_task)
remove_button.pack(pady=5)

task_list = tk.Listbox(app, width=40, height=10)
task_list.pack(pady=10)

app.mainloop()

```

**OUTPUT:**

```

-----
| [ Enter Task Here ] [Add Task] |
-----
|                               |
| 1. Complete Homework         |
|                               |
-----
| [Remove Task]                |
-----

```

### iii) VUI (Voice User Interface)

speech\_recognition library for voice input and the pyttsx3 library for text-to-speech output. Make sure you have these libraries installed (pip install SpeechRecognition pyttsx3).

```

import speech_recognition as sr
import pyttsx3

```

```

tasks = []
recognizer = sr.Recognizer()
engine = pyttsx3.init()

```

```

def add_task(task):

```

```

tasks.append(task)
engine.say(f"Task {task} added")
engine.runAndWait()

def view_tasks():
    if tasks:
        engine.say("Your tasks are")
        for task in tasks:
            engine.say(task)
    else:
        engine.say("No tasks to show")
    engine.runAndWait()

def remove_task(task_number):
    if 0 < task_number <= len(tasks):
        removed_task = tasks.pop(task_number - 1)
        engine.say(f"Task {removed_task} removed")
    else:
        engine.say("Invalid task number")
    engine.runAndWait()

def recognize_speech():
    with sr.Microphone() as source:
        print("Listening...")
        audio = recognizer.listen(source)
        try:
            command = recognizer.recognize_google(audio)
            return command
        except sr.UnknownValueError:
            engine.say("Sorry, I did not understand that")
            engine.runAndWait()
            return None

def main():
    while True:
        engine.say("Options: add task, view tasks, remove
task, or exit")

```

```

engine.runAndWait()

command = recognize_speech()
if not command:
    continue

if "add task" in command:
    engine.say("What is the task?")
    engine.runAndWait()
    task = recognize_speech()
    if task:
        add_task(task)
elif "view tasks" in command:
    view_tasks()
elif "remove task" in command:
    engine.say("Which task number to remove?")
    engine.runAndWait()
    task_number = recognize_speech()
    if task_number:
        remove_task(int(task_number))
elif "exit" in command:
    engine.say("Exiting...")
    engine.runAndWait()
    break
else:
    engine.say("Invalid option. Please try again.")
    engine.runAndWait()

if __name__ == "__main__":
    main()

```

## OUTPUT:

**Listening...**

**Listening...**

**Listening...**

**Listening...**

**Listening...**

**Listening...**

**Listening...**

**RESULT:**

the above python programs has been executed succesfully
